

2018 International Conference on Smart City and Intelligent Building (ICSCIB 2018)

Hefei, Anhui, China, on September 15-16, 2018

Special Session on:

“Information Technology and Intelligent Transportation Systems”

Session Organisers:

Dr. Yan Xing

44050412@163.com

School of Transportation Engineering, Shenyang Jianzhu University

Shenyang, China

Description:

As the hot spot and frontier of transportation development in the world, intelligent transportation is leading the development of smart city in the future. With the strategic, basic and leading role of the intelligent transportation industry in the national economy, the intelligent transportation system has been continuously applied in the modernization of traffic management and transportation services. Today, the age of intelligent transportation 2.0 has come, and the intelligent transportation industry will have new breakthroughs and new changes. This special session focuses on cutting-edge research in the field of intelligent transportation engineering and smart city to promote and guide the healthy development of the intelligent transportation industry.

Objectives:

The special session aims to strengthen the communication among scientific and technological scientists, researchers and engineers in the field of intelligent transportation to explore issues in the field of intelligent transportation; jointly construct a scientific research event that integrates policy research, technology exchange, and innovation achievement display, and strives to promote smart transportation industry; promote the application of intelligent transportation industry organization mode innovation and intelligent transportation technology in urban transportation, and actively promote the development of intelligent transportation industry.

🔍 Subject Coverage (not limited to)

- Intelligent Transportation Systems (ITS) and Technology
- Hardware and Software of ITS
- Transportation Intelligentization and Intelligent Logistics
- Intelligent Communication Network Systems
- Logistics and Transportation Management
- Optimization of Urban Traffic Systems
- Simulation of Traffic Congestion and Accident Situation
- Applications of Internet of Things and Big Data in ITS
